Experience

Embed Inc. has more than twenty-years of experience delivering complete solutions for embedded based projects, from hardware design specifications through firmware and end user applications. Our engineers excel in product performance, usability and creativity.

Teamwork

Our team follows a comprehensive engagement life cycle throughout design, development and delivery. We consistently deliver creative, high quality solutions and services to your clients.

Commitment

We are committed to becoming **your partner in customized applications for Stellar products.**

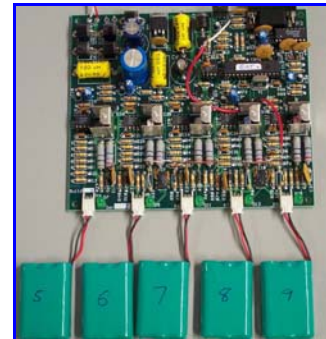

Partnerships with our clients are based on honesty, integrity and trust. Our technical knowledge, design expertise and history of success will accelerate your productivity and assure that your needs are met on time and on budget. Our emphasis on quality and usability will lead to a successful product introduction and continued marketplace leadership. As partners, we will succeed.

Smart Battery Charger

Technology	Services
Wireless Telemetry	Microcontroller system design
Motor control	Analog and digital electronic design
Servo controllers	Circuit layout and PCB design
PID control algorithms	Prototype and small production runs
Analog instrumentation and measurement	Regulatory compliance
Digital Signal Processor (DSP) systems	Total system design and implementation including electronic design, mechanical design and packaging, embedded firmware, host drivers, host libraries, GUI
DC to DC converters and switching power supplies	
Low power battery operated systems	
Ethernet, CAN, RS-485, RS-232, I ² C	
Image processing

Engagement Life Cycle

Your idea...

Management Team

Richard Fischer - *President*

richard@embedinc.com

In his twenty four years in the computer systems industry, Dick has focused his vision and energy on attaining the highest levels of customer service and product quality.

Olin Lathrop - *Chief Technical Officer*

olin@embedinc.com

With twenty two years of systems design and development experience, Olin has expertise in a wide array of embedded systems architecture and implementation.
